

Cat.	Sig Arrivals	Vertices	Edges	Avg. deg.	Max deg.	Triangles	CC count	Max CC
ADS	Uniform	Similar	Similar	R higher	R falls below S	Zero	S higher	Similar
BLK	Late/spiky	S earlier	Similar	R higher	Similar	R exceeds S	S transiently higher	S higher
COL	Coarse/late spikes	S earlier	Similar	R higher	Mixed	Mixed (R often)	S higher early	S higher
REC	Ramp–plateau	Similar	Similar	R higher	R exceeds S	R exceeds S; Zero	S transiently higher	Similar
SOC	Periodic/spiky	S earlier	S earlier	R higher	Mixed	Mixed	S transiently higher	S higher
SW	Bursty ramp	S earlier	S earlier	R higher	R exceeds S	Zero (bipartite)	S transiently higher	S higher
TRN	Nonstat./periodic	Similar	S earlier	S higher	Similar	S higher	Similar	Similar
WEB	Early burst	S earlier	S earlier	Cross	R falls below S	Similar	S early; R late	R late spike
ROAD	Bursty/periodic	S earlier	S earlier	R higher	R falls below S	S transiently higher	S transiently higher	Mixed

Table 1: Qualitative patterns by graph category. ADS, BLK, COL, REC, SOC, SW, TRN, WEB, and ROAD denote advertisement, blockchain, collaboration, recommendation, social, software, transportation, web, and road graphs, respectively. R and S denote the real-order and shuffled-order trajectories. “Similar” denotes only a small difference, “mixed” denotes within-category variation, and — denotes no common pattern or no evaluation.
