

Cat.	Arrivals	Vertices	Edges	Avg. deg.	Max deg.	Triangles	CC count	Max CC
ADS	Uniform	Similar	Similar	R higher	R early; S late	Zero	S higher	Similar
BLK	Late/spiky	S earlier	Similar	R higher	Mixed	R higher	S much higher	S earlier
COL	Coarse/late spikes	S earlier	Similar	Similar	Mixed	Mixed (R often)	S higher early	Mixed
REC	Ramp-plateau	S earlier	Similar	R higher	R higher	Mostly zero	S higher	Mixed
SOC	Periodic/spiky	S earlier	S earlier	R higher	Similar	Mixed (R often)	S higher	Mixed
SW	Bursty ramp	S earlier	S earlier	R higher	R early	Zero (bipartite)	S much higher	—
TRN	Nonstat./periodic	Similar	S earlier	S higher	Similar	S higher	Similar	Similar
WEB	Early burst	S earlier	S earlier	Mixed	S higher	Similar	S early; R late	R late spike
ROAD	Bursty/periodic	S earlier	S earlier	R higher	S peaks	S transient high	S much higher	Mixed

Table 1: Qualitative patterns by graph category. ADS, BLK, COL, REC, SOC, SW, TRN, WEB, and ROAD denote advertisement, blockchain, collaboration, recommendation, social, software, transportation, web, and road graphs, respectively. R and S denote the real-order and shuffled-order trajectories. “Similar” denotes only a small difference, “mixed” denotes within-category variation, and — denotes no common pattern or no evaluation.
